HOME IRRIGATION SAFETY

Don't let your Irrigation System contaminate the water you drink....

Irrigation Systems make watering lawns and gardens easier and save time, BUT water that may be contaminated by weed killers and/or fertilizers can be backsiphoned (backflow) into your drinking water. Irrigation systems not protected by approved backflow prevention assemblies could endanger the health of a household, neighborhood or community.

ALL IRRIGATION SYSTEMS....new or existing....MUST BE EQUIPPED with an approved backflow prevention assembly. Only property installed, state-approved backflow prevention assemblies meet the plumbing code and provide health protection for your family and neighbors. Your local water utility can give you a free information of state-approved assemblies and certified testers.

TWO TYPES OF BACKFLOW PREVENTION ASSEMBLIES

1. PRESSURE VACUUM BREAKER (PVB)

- Sophisticated
- Versatile
- Requires annual testing by a certified tester

2. REDUCED PRESSURE BACKFLOW ASSEMBLY (RP)

- Usually most expensive
- Most complex
- Allows for application of fertilizer or other chemicals into irrigation system (no other type has this approval)
- Requires annual testing by a certified tester

"Irrigation in Texas is regulated by the Texas Commission on Environmental Quality (TCEQ) (MC-178), P.O. Box 13087, Austin, Texas 78711-3087. TCEQ's web site is: www.tceq.state.tx.us."
