

CSCI 4510 ASSIGNMENT 1 FALL 2008

DUE OCTOBER 17

Write HTML documents and PHP scripts that let a professor enter students' grades online.

For the grade entry option, the professor will enter his/her L number and password (just like at LC). I'll create and send to you a password file that contains some made up L numbers and passwords. Don't worry about encryption. The script will read the file to look for the L number and corresponding password and output an error message if not found.

There should be the following form items, each with a submit button:

- a dropdown list for the term (code the terms as explained in class)
- a textbox for the CRN (no need to validate)
- a textbox for the student L number (validate)
- a dropdown for the grade (None, A+, A, A-, B+, B, B-, C+, C, C-, D+, D, F, I, NA, NC, P, W, WF)

This should all be put into a grade file.
