

FFXI XP Penalty Chart

Notes and Assumptions

- From Level 4 to 24 the XP penalty is $.1(\text{BaseTNL})$ and from Level 25-67 the XP penalty is $.08(\text{BaseTNL})$. From Level 68 to 75, the XP penalty is a fixed 2400 XP. [April 21, 2005 Update].
- R2 and R3 has the same effect as R1 when cast on a target that is level 50 and under.
- If you are at least Level 51 and in a level capped situation (i.e. BCNM, Garrison, EF fights, Eco-Warrior, The Big One), get KO'ed, and either ejected or the restriction ends, R2 and R3 will still recover 75% and 90% of the lost XP. In certain situations your level restriction will end right after the KO.
- XP Penalty from Mijin Gakure is 0.
- There is no XP Penalty when KO'ed in Ballista, Level 20 cap Trial Size Avatar Battles, Shattering Stars BCNM, and ENM battlefields.
- There is no XP Penalty with Level 1 to 3 jobs.
- If you are KO'ed in a capped area, you will lose XP based on the level you was capped at [September 14, 2004 update].
- Mogenhancement Experience key item reduces base XP penalty by 5%. Raise spells done on a target with the key item Mogenhancement Experience will recover XP based on that reduced XP penalty. [April 21, 2005 update.]
- Hi-Reraiser gives RR2 effect for 1 hour. Reraiser and Instant Reraise gives RR effect for 1 hour. Reraise enchantment devices gives either RR1 or RR2 effects (depending on item) and lasts for 2 hours.
- Reraise effects cancel upon Warp, Escape, and Teleport. They do not cancel on Regional Teleport or warps given from NPC characters.
- If a character was level 51 and delevels to 50, the character can still get the full effects of R2 and R3 for that KO as the penalty was based on Level 51. However, if the character gets KO again before regaining that level, R2 and R3 will have the same effect as R1.
- If you delevel, you lose XP based on that level you was. If you are revived, effects of Raise will be based on that lost level. You may regain your level on revival.
- Goddess Hymnus is an Reraise Effect with a penalty somewhere in between R1 and R2, more around the 50% XP recovery rate.

Reading the tables

- The table below is based as if you was 0 XP into your level. Actual XP loss may not match this, but it will always be a value between the current level and the next level. For example, if you was Level 14 and do not have Mogenhancement Experience, you can expect to lose between 306 to 323 XP if you opt to Home Point.
- All values on the table is rounded to the next whole number.
- BaseTNL means how much XP you need until you level. The HP column represents the minimum XP that you can lose at your current level.
- BaseTNL means the XP to gain a level as if you was 0 XP into that level. XP to Level is the same thing as BaseTNL.
- CurrentTNL means XP you need to gain a level with a job.
- R1 means Raise 1, R2 means Raise 2, and R3 means Raise 3.
- RR1 matches R1, RR2 matches R2, and RR3 matches R3.
